Meter re-connections and disconnections

Cost-effective solutions that enhance the reliability of transmission and distribution across electrical and telecommunication networks.

Service Stream has a strong heritage in delivering network services reaching back to the deregulation of the Victorian power market in the early 1990s. Today, we provide end-to-end power and telecommunications network services to generators, public and private asset operators and end-users across Australia.

Our operate and maintain capabilities:

- Overhead and underground distribution network maintenance and minor construction
- Substation maintenance and minor capital works and upgrades
- Network switching and operations
- Engineering and design
- Connections and metering
- Asset inspections
- Fault and emergency support

Our design and construct capabilities:

- Project management
- Overhead and underground distribution network design and construction
- Civil construction and cable installation
- Cable jointing
- Substation and switchyard construction
- Network asset relocations

Distribution and Metering Services

With more than 25 years' experience as a domestic services provider in Australia, we provide network maintenance, asset inspection, commercial and consumer installation services, and the delivery of initiatives designed to minimise energy consumption.

By utilising the support of our core customer care, logistics, project management and IT capabilities, we deliver a wide range of services across Australia's electricity networks, including:

- Distribution asset inspection programs
- Contestable metering installations
- Meter reading services
- Connection services
- Meter accuracy testing
- Smart-meter network deployments
- Asset replacement programs
- Surveys and consultancy services
- CT testing
- 24/7 emergency response
- Customer service

Improving competency in the Power industry with our EnerSafe RTO

We are committed to growing our people's skill and competency through our in-house Registered Training Organisation (RTO), EnerSafe.

EnerSafe provides specialist training to the required certification level as specified by each network service provider, providing the market with a consistent, dependable, safe and high quality service.
