

Trusted renewable energy professionals delivering safe and quality new energy solutions across Australia.

36K+

residential solar PV installations annually across Australia

550+

commercial solar PV installations annually across Australia

Australia's renewables and new energy industry is an evolving industry under high visibility and scrutiny.

With abundant natural resources, including sunshine and wind, Australia is transforming its energy landscape and working to shift from traditional fossil fuels to sustainable alternatives. The country has invested heavily in solar and wind farms, battery storage technology, and green hydrogen projects, aiming to cut carbon emissions and drive economic growth.

Government policies and private sector initiatives are driving this transition, creating new jobs and fostering technological advancements.

As Australia continues to harness its renewable potential, our specialist teams provide a range of energy management and saving solutions services including:

- Solar Photovoltaic (PV) system installation
- Electric vehicle charging infrastructure
- Battery storage installations
- Energy efficiency audits
- Behind the meter installation services
- Distributed energy solutions
- Hot water, heating and cooling installations
- Ongoing system operation and maintenance

Electrical inspection and compliance services through our company TechSafe Australia

As part of the Service Stream Group, TechSafe Australia perform electrical inspection and compliance services on all types of renewable systems including small residential solar installations, solar farms and wind farms.

The team perform all types of:

- Electrical inspections
- Consultancy
- Auditing
- Testing
- Training services
