**ASX ANNOUNCEMENT**
8 September 2026

# REMSENSE EXTENDS WOODSIDE FOOTPRINT TO TEN ASSETS

**RemSense Technologies Limited (ASX:REM)** (**RemSense** or **the Company**) is pleased to announce that it has received Letters of Award for two further projects for the deployment of its **virtualplant** technology across two additional offshore Oil & Gas platforms in Bass Strait, now operated by **Woodside Energy (ASX:WDS)**.

The two awards have a combined contract value of A$365,230 and represent a significant continuation and expansion of RemSense's presence in Bass Strait following the transition of operations from Esso Australia to Woodside Energy on 1 July 2026. The awards take RemSense's virtualplant footprint with Woodside to ten (10) offshore and onshore assets across Australia, comprising five (5) assets in the NW Shelf and five (5) assets in Bass Strait, providing further confirmation of the platform's value and the continued expansion of RemSense's long-standing relationship with Woodside.

RemSense has worked with Woodside since 2018, with the relationship growing over time through the delivery and adoption of RemSense's digital asset visualisation technologies across a broadening portfolio of Woodside-operated assets.

RemSense first introduced virtualplant into the Bass Strait operations under Esso. The addition of two further offshore platforms following the transition to Woodside demonstrates the continued relevance, scalability and value of virtualplant, while further extending RemSense's established footprint with Woodside.

## Project Overview

Under the new Letters of Award, RemSense will deliver high-resolution reality capture, processing and creation of virtualplant visual twins for both offshore platforms. The project includes:

- Aerial and terrestrial ultra-high-resolution LiDAR scanning and advanced 360-degree photogrammetry
- Creation of enhanced virtualplant visual twins to support Remote Digital Visual Inspections (RDVI), maintenance planning and engineering workflows
- Ongoing virtualplant access and subscription services enabling Woodside and RemSense teams to collaborate in real time
- Reduced reliance on offshore site visits, supporting safer and more efficient inspection and maintenance planning

This combined contract value of A$365,230 covers both platforms, with RemSense's project team scheduled to mobilise to site on 13th September 2026.

**Growing Relationship with Woodside**

RemSense has worked with Woodside since 2018, with the relationship expanding over time through the application of RemSense's reality capture and digital asset visualisation capabilities across complex operating assets.

The addition of these two Bass Strait platforms represents a further extension of that relationship and provides RemSense with an opportunity to build on its existing experience with Woodside while continuing the virtualplant deployments previously established within the Bass Strait operations.

Bass Strait alone comprises 16 offshore platforms and installations, underlining the significant runway that remains for further virtualplant deployment as RemSense continues to build on its expanding footprint across Woodside's global asset base.

**RemSense Chief Executive Officer Warren Cook said:**

"These awards are particularly significant for RemSense because they bring together two important relationships for the Company. We established virtualplant within the Bass Strait operations under Esso, while RemSense has separately been working with Woodside since 2018.

The continued expansion of virtualplant following Woodside's transition into the Bass Strait operations provides a natural opportunity to build on both of those foundations. The addition of another two offshore platforms strengthens our growing relationship with Woodside and demonstrates the repeatable and scalable deployment model we are targeting with Tier 1 energy and resources operators." Our team is scheduled to mobilise to both platforms on 13th September, reflecting the pace at which we are able to convert new awards into on-site delivery."

There are no material terms or conditions precedent requiring satisfaction to enable the contract works to be fulfilled, and there are no terms or conditions to the contract considered outside of normal commercial terms and conditions, including termination clauses.

WE CREATE SOLUTIONS

**About RemSense**

RemSense Technologies Limited (**ASX:REM**) is a pioneer in advanced digital asset visualisation, delivering proven solutions to global energy and resources clients. Its proprietary virtualplant platform transforms high-resolution 3D imagery into intelligent visual twins, providing an intuitive and immersive environment for asset management. By combining precision photogrammetry with powerful data integration, virtualplant enables clients to optimise productivity, enhance safety, and reduce operational costs, demonstrating RemSense's expertise in turning cutting-edge technology into tangible value.
