Integrating solar **energy solutions** around the world

We work with our advisory teams to provide consulting, engineering, and design services across the concentrated solar power (CSP) project life cycle. From early phase siting through to technology selection, arrangements, and grid connection, we help our customers integrate solar energy into their operations and reduce their reliance on fossil fuels.

We also support the delivery and operation of our customers' assets and provide specialist capabilities in both solar photovoltaics (PV) and solar thermal technologies.

Providing FEED services for a solar power plant in Australia

We're supporting an Australian technology provider to build a utility-scale, grid-connected solar power plant with GWh-scale storage capacity. We're providing early engineering and FEED services to help our customer reach final investment decisions on the project.

Conducting solar farm due diligence

Our consulting business conducted high-level technical analysis for our customer's solar farm to assess its energy output and provide recommendations to inform future investment decisions. Their scope included a review of the energy yield, marginal-loss-factor constraints, a structural review, and due diligence on key contracts such as power purchase agreements.

Providing engineering and procurement support for solar PV plants in Morocco

We supported the execution of an engineering, procurement, and construction management (EPCM) contract for the construction of four solar PV plants. Under the scope, our teams provided technical support to the procurement and detailed engineering phases of the project.
