

Stakk Selected to Deliver Signature Verification Tool for the United States Federal Bureau of Investigation (FBI)

- **Stakk has secured a contract delivering signature verification capabilities for use by the FBI**, through wholly owned subsidiary ParaScript.
- **The first phase is fully live**, with work under way on additional capabilities to locate and prepare reference signatures.
- **The engagement is expected to contribute meaningfully to Stakk's FY2027 revenue target**, while its commercial terms and the underlying FBI project remain confidential.
- **The live deployment establishes a law enforcement use case** as Stakk pursues additional opportunities with U.S. state and federal agencies and agencies internationally.
- The new contract is a significant endorsement of the world class technology and trustworthiness and capabilities of the solution.

Sydney, Tuesday, 29 September 2026: Stakk Limited (ASX: SKK) ("Stakk" or the "Company") is pleased to advise that wholly owned subsidiary ParaScript, working with its strategic partner in the U.S. government sector, has been engaged to deliver signature verification capabilities for use by the United States Federal Bureau of Investigation (FBI).

Stakk's technology supports the assessment of physical signatures where authenticity or potential fraud is in question. The first phase of the FBI deployment is fully live. Work is now under way on a second phase that will add capabilities to locate and prepare reference signatures for the verification process.

Stakk can now disclose the engagement to the market under Listing Rule 3.1. Its commercial terms are confidential, and the Company cannot disclose details of the underlying FBI project or how the software is used operationally. Stakk can however

confirm that the engagement is subject to an agreement that runs to December 2027, and may auto-renew for subsequent 12-months terms thereafter, unless terminated by either party prior to a renewal date. It is also expected to contribute meaningfully to Stakk's FY2027 revenue target, which is now expected to surpassed \$55m.

The engagement also establishes a live Law Enforcement deployment of Stakk's technology. It demonstrates the relevance of the Group's capabilities in a sector where the authenticity of signatures and documents can be critical and provides a foundation for Stakk to pursue further Law Enforcement opportunities.

The need to establish authenticity extends across financial services, healthcare, insurance, telecommunications, and government. As AI-powered fraud grows more sophisticated, Stakk expects demand for these capabilities to increase. The Company sees opportunities with state and federal Law Enforcement agencies across the United States, as well as with agencies internationally.

Stakk Director Arthur Lo, who led the Company's acquisition of ParaScript, said:

"We acquired ParaScript because its technology, combined with the capabilities Stakk had already developed, addresses a need that extends well beyond any one industry.

Delivering these capabilities for use by the FBI reinforces our conviction that trusted, accurate decisioning matters across financial services, healthcare, government, law enforcement and other regulated sectors.

As fraud grows more sophisticated, we see a substantial opportunity to bring these solutions to agencies in the United States and internationally. This engagement is a powerful example of why we recently brought the two businesses together."

This announcement has been authorised for release by the Board of Stakk Limited.

--End--

**About Stakk**

Stakk Limited (ASX: SKK) is a scaled, profitable and globally relevant AI-native Digital Trust infrastructure group focused on combating fraud. Its integrated platform enables financial institutions, governments, law-enforcement agencies, healthcare providers, insurers, telecommunications companies, and other regulated enterprises to establish trust across the complete interaction – from identity verification and document authentication through to fraud prevention, transaction authorisation, and real-time contextual decisioning.

Stakk combines more than 30 years of proprietary AI-powered document intelligence with contextual Digital Personas, federated signal intelligence and pre-execution decisioning. The group serves more than 300 enterprise customers across the United States, Europe, the Middle East and Australia and processes more than 110 billion interactions annually, creating a continuously expanding intelligence asset that strengthens its ability to identify and respond to evolving AI-driven fraud threats.
