

Environmental permitting for upcoming field program received at Mount Jackson Gold-Silver Project, Nevada

Key Highlights:

- ACDC Metals has received environmental permitting approval from the Bureau of Land Management (BLM) for its upcoming geophysics survey and drill program.
- 15 holes have been permitted to test extensions to gold-silver mineralisation at the Pegasus Zone and maiden drilling at the 3 Shaft Zone.
- Geophysics survey, CSAMT (Controlled Source Audio Magnetotellurics), will commence in October.
- CSAMT will refine drill targets defined by the aeromagnetic and radiometric survey reported on [22 July 2026](#).
- Civil contractor to commence works to prepare drill pads and access tracks for upcoming drill program.

ACDC Metals Limited (ASX: ADC) (**ACDC Metals** or the **Company**) is pleased to announce that it has received permits for a maiden drill program and a CSAMT geophysical survey at the Mount Jackson Gold-Silver Project within the Walker Lane of Nevada, USA. The maiden drilling campaign will target areas identified from recent geophysical surveys and test extensions of known mineralisation. The Walker Lane is a major mineralised belt in Nevada with a long history of gold and silver production and a high level of current exploration and development activity.

ACDC Metals CEO Tom Davidson commented:

"Receiving BLM approval is a key milestone for Mount Jackson. With the permit in hand, we can lodge the bond and begin field activities, starting with the CSAMT survey and site preparation for our maiden drill program."

The CSAMT survey will sharpen the targets defined by our aeromagnetic and radiometric survey. Our maiden drill program will then build on the historical results reported on 30 April 2026, aiming to confirm previous mineralisation, test extents and validate our understanding of the system."

Today's announcement is an important step as we execute our field program and ramp up news flow on our Mount Jackson Project."

Permitting Approval

BLM has approved the proposed field program, including the CSAMT survey and drilling. The Company can utilise existing access tracks and drill pads from previous works, minimising disturbance and reducing the time required for civil works. Following lodgement of the reclamation bond with BLM, the Company can commence field activities.

Projects:

CSAMT Survey

KLM Geoscience has been engaged to complete a 12 line-km survey across the Pegasus gold-silver and 3 Shaft copper targets. The survey will use Controlled Source Audio Magnetotellurics (CSAMT) (refer to Figures 2 and 3).

¹ ASX announcement 22 July 2026 – Magnetic Survey Defines drill targets at Mount Jackson Gold-Silver Project, Nevada.

Drill Program

As previously announced², the Company has signed an agreement with FTE Drilling USA Inc. to complete up to 2,500 metres of reverse circulation (RC) drilling at the Mount Jackson Project; scheduling is still in progress, with completion targeted in 2026.

Next Steps

- CSAMT survey and interpretation at Mount Jackson targeting completion in October 2026.
- Site works for access tracks and drill pads to commence in October 2026.
- Maiden 2,500 metre RC drill program targeted to commence in Q4 CY2026.

-ENDS-

Announcement has been authorised for release by the Board.

² ASX announcement – 19 August 2026 – Maiden drill program planned at Mount Jackson Gold-Silver Project, Nevada.

About ACDC Metals

ACDC Metals is a diversified exploration company combining resource-backed critical minerals assets with high-impact precious metals exploration. The Company has completed resource estimates and studies on its Heavy Mineral Sands and Rare Earth Element projects and is currently advancing gold and silver opportunities in Australia and the United States to drive growth, discovery and shareholder value.

We refer shareholders and interested parties to the website www.acdcmetals.com.au where they can access the most recent corporate presentation, video interviews and other information.

Competent Persons Statement

The information in this document that relates to exploration results is based on information reviewed by Mr Anders Hogrelius, M.Sc., RpGEO. He is a Member of the Australian Institute of Geoscientists (AIG) and a Registered Member of the Society for Mining, Metallurgy and Exploration (SME). Mr Hogrelius provides consulting services to ACDC Metals and has sufficient experience relevant to the style of mineralisation and types of deposits under consideration and to the activity which has been undertaken to qualify as a Competent Person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code). Mr Hogrelius consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Previously Reported Information

This announcement includes information that relates to exploration results previously reported in the ASX announcements dated 30 April 2026 and 22 July 2026. The Company confirms that it is not aware of any new information or data that materially affects the information included in those announcements and that all material assumptions and technical parameters underpinning those results continue to apply and have not materially changed.

Forward Looking Statements

This announcement contains forward looking statements, including statements about planned survey and drilling programs, permitting and timing. Forward looking statements are based on assumptions and estimates that involve known and unknown risks, many of which are outside the control of the Company. Actual results may differ materially from those expressed or implied. The Company does not undertake to update forward looking statements except as required by law. Exploration targets and planned programs are conceptual in nature and there is no certainty that they will result in the discovery of a mineral resource.
