

Mineral Range Tungsten Project, Drilling Commences

eMetals Limited (ASX:EMT) (**eMetals**) (**Company**) is pleased to announce drilling activities have commenced at the Mineral Range Tungsten Project (**Project**) in Utah, USA, where it is targeting high grade tungsten mineralisation within the Mineral Range in Beaver County. The Project comprises a 100% interest in 109 mineral claims covering 2,072 acres (~838 hectares) of the Mineral Range Batholith, with approximately 12-kilometres of strike length providing multiple exploration prospects with significant potential to test known strike and depth extensions of historical mines.

The drill program will target tungsten mineralisation hosted within metasomatised carbonate-skarn beds adjacent to the Mineral Range Batholith, a favourable setting for intrusion-related tungsten skarn mineralisation, comprising of 17 drillholes from five drill pads, with depths ranging from approximately 50 to 200 metres. The first of three drillholes planned from Drill Pad 1 commenced early this week to test for strike and depth extensions of the known tungsten mineralised horizon adjacent to the historical Garnet mine, which reported production of 634 tonnes @ 0.64% WO₃ [*Tungsten Deposits of the Mineral Range, Beaver County, Utah by Arthur L Crawford & Alfred M Buranek, June 1957*].

Holes are designed to intersect the target horizon perpendicular to strike, providing an effective test of mineralisation geometry and continuity. The program will utilize HQ diamond core drilling to provide high-quality geological, structural and assay data. Drilling is expected to take 5-6 weeks with all assays to be dispatched to ALS in Reno, Nevada upon completion of the program.

Executive Director Mr Mathew Walker commented: *"Following extensive initial field work and reconnaissance in the past few months, we are delighted to commence the drilling of the Mineral Range Tungsten Project so soon after announcing the acquisition of the Project early in April this year. This is a credit to our local partners and to the favourable and stable regulatory environment in Utah, USA".*
