MEL2 contracted works rises to \$66 million

SKS Technologies Group Limited (ASX: SKS) has been awarded an additional \$38 million of works with Built for the next stage of the MEL2 data centre project in Melbourne's northwest. In addition to the \$28 million of early works that was announced on 14 July this year, the total project value is now \$66 million.

SKS Technologies Chief Executive Officer, Matthew Jinks, said, "Winning further work from the same developer demonstrates confidence in our workmanship, reliability and ability to deliver critical and complex electrical infrastructure on time and to specification, whilst building our reputation more broadly as a trusted partner on major projects across the industry."

The additional scope of works relates to inground services and cold shell works, including:

- supply and installation of high voltage, low voltage, and inground communications infrastructure, facilitating early works and enabling subsequent structural construction activities;
- supply and installation of 22kV cabling from the substation to Shell A;
- installation of 22kV switchroom equipment;
- cold shell fit-out of the Shell A building, incorporating lighting, power distribution, earthing and cable support systems; and
- internal fit out of the clients technical space including offices, stores, amenities and communications rooms.

As a result of the additional work, current work on hand sits at \$270 million. With a robust and growing tendered pipeline, and a client base that keeps returning, SKS is well placed to grow work on hand as the timing of new awards falls into place, supporting continued growth.
