About icetana AI

icetana AI develops self-learning security AI software designed for large-scale surveillance networks and Security Operations Centers (SOCs). Its advanced AI technology continuously learns what is normal for every individual camera and automatically detects, highlights, and reports unusual or potentially dangerous events in real time.

Traditional security monitoring requires human operators to watch thousands of video streams, an overwhelming and inefficient task. icetana AI replaces much of this manual effort by providing autonomous, real-time event detection, significantly reducing security risks while lowering personnel requirements.

Built for scale, icetana AI eliminates the need for manual rule configuration or camera stream setup. Its self-learning approach adapts dynamically to each environment, making it ideal for complex, multi-site deployments such as retail, hospitality, public safety, transportation, education, and enterprise infrastructure.

Today, icetana AI's technology operates globally, deployed across 70+ sites, 20,000+ cameras, and in 15+ countries, providing continuous, intelligent monitoring that empowers organisations to stay secure, proactive, and efficient.
