

Adherium Partners with Florida Lung, Asthma & Sleep Specialists to Bring Hailie® Smartinhaler® Remote Therapeutic Monitoring to Central Florida

Independent Central Florida pulmonary specialty practice to implement FDA-cleared Hailie® platform across its greater Orlando-area locations to enhance asthma and COPD care

Highlights:

- Adherium secures new partnership with Florida Lung, Asthma & Sleep Specialists (FLASS).
- FLASS to implement the Hailie platform across its network to enhance asthma and COPD management through remote therapeutic monitoring (RTM).

Melbourne, Australia – 26 October 2026: Adherium Limited (ASX: ADR), a digital respiratory management company and developer of the FDA-cleared Hailie® Smartinhaler® platform, today announced a new partnership with Florida Lung, Asthma & Sleep Specialists (FLASS), a leading independent pulmonary and critical care practice in Central Florida. Through the partnership, FLASS will implement the Hailie platform across its network to enhance asthma and COPD management through remote therapeutic monitoring (RTM).

Founded by Dr. Fortune Alabi, MD, and Dr. Fred Umeh, MD, FLASS provides comprehensive pulmonary and critical care services, including asthma and sleep medicine, to patients across several locations in the greater Orlando area. The practice's mission — "Where Breath is Life and We Treat You Like Family" — reflects its focus on patient-centered care and its commitment to using technology to support patient outcomes.

With the Hailie platform, FLASS clinicians can seamlessly integrate FDA-cleared Hailie sensors and remote monitoring services into clinical workflows, enabling:

- Real-time visibility into medication adherence and inhaler technique for patients with asthma and COPD
- Actionable insights that help clinicians personalise treatment and intervene proactively
- Early identification of patients at risk of exacerbations, supporting timely outreach before breathing attacks occur
- Ongoing patient engagement between office visits through reimbursable remote therapeutic monitoring

Founder and Chief Executive Officer of FLASS, Dr. Fortune Alabi MD, said: *"Our mission has always been to treat every patient like family and to pair compassionate care with the best available technology. Partnering with Adherium gives our clinicians real-time insight into how our patients are using their inhalers between visits. That visibility — into adherence and technique — allows us to intervene earlier, personalise therapy, and ultimately keep more of our asthma and COPD patients healthy and out of the hospital."*

Adherium Chief Executive Officer, John Perry, said: *"FLASS is exactly the kind of partner we look for — an independent, physician-led group that leads its market in clinical excellence and isn't afraid to innovate on behalf of its patients. Following the strong results our partners are seeing across the country, this partnership extends the reach of the Hailie platform into Central Florida and continues our momentum in building the standard of digital respiratory care in the United States."*

Medication adherence remains one of the greatest challenges in chronic respiratory care, with poor adherence and improper inhaler technique driving avoidable exacerbations, emergency visits, and hospitalisations. The Hailie platform addresses this by attaching FDA-cleared sensors to patients' existing inhalers, capturing objective usage data, and delivering it to clinicians through an integrated monitoring workflow — supporting reimbursement under established RTM codes.

The rollout will begin at FLASS locations across Central Florida, with Adherium providing implementation, clinical applications, and patient onboarding support.

This ASX announcement was approved and authorised for release by the Board of Adherium.

About Adherium (ASX: ADR):

Adherium is a provider of integrated digital health solutions and a developer of connected respiratory medical devices, with more than 180,000 sold globally. Adherium's Hailie[®] platform provides clinicians, healthcare providers, and patients access to remotely monitor medication usage parameters and adherence, supporting reimbursement for qualifying patient management. The Hailie[®] solution includes a suite of integration tools to enable the capture and sharing of health data via mobile and desktop apps, Software Development Kit (SDK) and Application Programming Interface (API) integration tools, and Adherium's own broad range of sensors connected to respiratory medications. Adherium's Hailie[®] solution is designed to provide visibility to healthcare providers of medication use history to better understand patterns in patient respiratory disease.

About Florida Lung, Asthma & Sleep Specialists (FLASS):

Founded more than a decade ago, Florida Lung, Asthma & Sleep Specialists (FLASS) is one of Central Florida's leading independent pulmonary specialty practices, providing comprehensive care in pulmonary medicine, critical care, asthma, and sleep medicine.

Led by Chief Executive Officer Dr. Fortune Alabi MD, and Chief Operations Officer Simon Abbott, FLASS is committed to delivering compassionate, holistic, patient-centered care, treating every patient as an extension of the FLASS family.

Beyond traditional outpatient services, FLASS has developed an expanding continuum of respiratory care encompassing hospital-based services, post-acute care, rehabilitation facilities, and in-home pulmonary rehabilitation. This integrated approach supports patients throughout their recovery and long-term management of chronic respiratory conditions, helping improve continuity of care and reduce avoidable hospital readmissions.

By combining clinical expertise with innovative technologies, including remote respiratory monitoring and connected inhaler technology, FLASS is advancing a more proactive and coordinated approach to respiratory care, supporting medication adherence, earlier intervention, and improved patient outcomes.

FLASS remains focused on delivering connected, comprehensive respiratory care — from hospital to home — ensuring patients receive the right care, at the right time, in the most appropriate setting.
