About Acusensus

Acusensus is a technology company that was founded in 2018 with a mission to design and develop artificial intelligence enabled road safety solutions. Collaborating with governments and commercial stakeholders to tackle distracted driving globally is Acusensus' first priority. Acusensus has pioneered intelligent solutions that provide anywhere, anytime digital evidence that can be used in conjunction with law enforcement to drive behavioural change and improve road safety. Acusensus technology is used to detect and provide prosecutable evidence of distracted driving (mobile phone use), seatbelt compliance, speeding, railway crossing compliance and the monitoring of vehicles of interest.

Leveraging AI and sensing expertise, Acusensus also provides technology that protects workers in live traffic environments. The Forsite by Acusensus road worker safety system integrates roadside sensors, connected wearables and real time analytics to give crews early warning of approaching vehicle risks, delivering the vital seconds needed to avoid harm while generating data that helps make worksites safer over time.

Acusensus listed on the Australian Securities Exchange in January 2023. Acusensus is headquartered in Melbourne, Australia, with offices also in Sydney, Brisbane, Perth, Auckland (New Zealand), Christchurch (New Zealand), London (United Kingdom), Las Vegas Nevada (United States) and Hartford Connecticut (United States).

Acusensus 2026 Annual General Meeting – Chair’s Address

I would like to extend a warm welcome to all of you for attending our 2026 Annual General Meeting. As the Chair of Acusensus Limited, it is once again my privilege to be before you today and provide an overview of the Company's substantial strategic achievements over the past year.

Acusensus remains relentlessly focused on its original mission of fostering positive changes in driver behaviour and saving lives. Our multi-function technology platform is uniquely positioned to address the Fatal Five dangerous road behaviours, expanding beyond distracted driving and seatbelt non-compliance into multi-jurisdictional speed enforcement, fatigue monitoring and pioneering real-world impaired driving detection. Through deep, collaborative relationships with government bodies, transport authorities and commercial partners, we have scaled our operations to over 40,000 deployments per year. The sobering reality of road fatalities continues to underscore the critical and life-saving work our technology enables. We are not just an enforcement company, we are a vital contributor to improving road safety globally.

The success we celebrate today is reinforced by the clear execution of our growth strategy across domestic and international markets. Acusensus has successfully transitioned into a multi-jurisdictional, multi-offence technology provider, and this year’s milestone contract wins, expansions and rollouts have diversified our geographic footprint and reduced customer concentration. In Australia, we have continued to strengthen our domestic foothold. This includes securing a \$19.9 million multi-function fixed site enforcement camera contract with the WA Road Safety Commission, and a \$13 million contract variation to extend and double our transportable multi-function fleet in Western Australia. Growth was further supported by a \$16.6 million contract to expand the transportable units for the Department of Transport and Main Roads’ speed program in Queensland, and the ACT Government enhanced its program to include seatbelt enforcement. Our solutions are now more deeply integrated than ever before, simultaneously addressing distracted driving, seatbelt usage and speed control, delivering value to our partners.

The 2026 financial year has been significant for our global presence. International business now contributes 27% of group revenues, compared with 7% a year ago. We successfully completed the operational rollout of our \$92 million nationwide mobile speed camera contract in New Zealand, demonstrating the scalability of our core technology. In the United States, we secured the Company’s first major statewide automated work zone speed contract with the Connecticut Department of Transportation, valued at US\$22.6 million.

Finally, our business in the United Kingdom continues to mature, supporting our expanding global tender pipeline.

New product development has remained a strong focus, reflecting Acusensus' commitment to solving unaddressed and emerging road safety challenges. Over the year, we achieved the commercial launch of our road worker safety platform, Forsite Connected Safety, securing long-term commercial agreements with Tier-1 infrastructure and construction enterprises. The platform addresses the multi-billion-dollar global challenge of roadside worker safety and establishes highly scalable, recurring-revenue opportunities for the Company. Alongside this innovation, we have continuously enhanced our existing solutions, ensuring we remain at the cutting edge of multi-function enforcement. Acusensus has entered the 2027 financial year with considerable momentum. We will continue to execute our vision to be a leading multi-function enforcement technology provider globally. We are supported by strong partnerships, a powerful product portfolio and a strategy that is delivering tangible results on the ground. Our proprietary AI platform, proven across multiple offence types and jurisdictions, is increasingly recognised by government customers as the benchmark for high-quality, scalable road safety enforcement. The ongoing maturation of our international businesses, combined with the continued strength of our Australian operations and the traction of Forsite, gives the Board real confidence in the trajectory of the business.

On behalf of the Board, I express our gratitude to our dedicated executive team and all Acusensus employees for their tireless efforts, innovation and passion. Their commitment is the driving force behind our success. To all of our shareholders, thank you for your confidence and support. We remain committed to delivering both long-term shareholder value and a significant positive impact on road safety globally.

We look forward to an exciting year of continued innovation, international growth, and most importantly, safer roads.

END
