EKJV Exploration

During the first quarter of FY27, a total of 7,831m of exploration drilling was completed within the EKJV area. The drilling programs were undertaken to test and extend known mineralisation and to support ongoing resource definition activities at the Startrek deposits (Table 1).

At the Startrek deposit, five diamond drill holes were completed during the reporting period drill testing the mineralisation at depth. Assay results for twelve drill holes received during the quarter are reported herein, including outstanding assay results from drill holes completed in the previous quarter. A total of 4,994m of reverse circulation drilling was completed during the reporting period, drill testing the mineralisation at surface. No assay results have been returned for the surface drilling campaign

The drilling results reported herein have not been incorporated into a new or updated Mineral Resource estimate, and there is no material change to the previously reported Mineral Resources for the EKJV.

Please refer to the EKJV Quarterly Exploration Report released on 28 October 2026 for further details.

Work Completed

Startrek

During the quarter, underground diamond and surface reverse circulation drilling continued at the Startrek prospect. This drilling is aimed to increase geological confidence and drill test geological targets associated with Startrek mineralisation. The assay results for twelve drill holes were returned within the quarter (Figure 1).

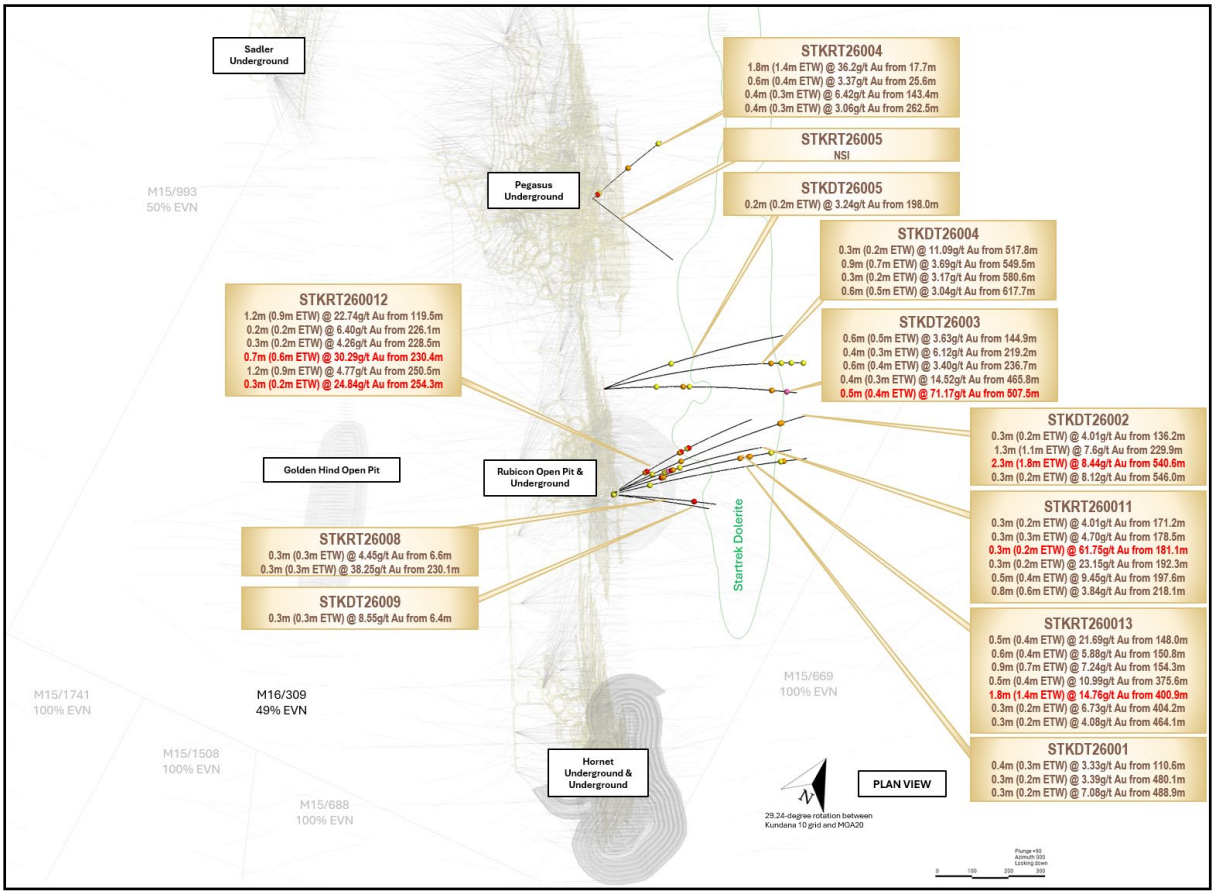

Figure 1: A Plan view of the assay results location returned from within the quarter for Startrek. Image provided in K10 Mine Grid (refer Tribune ASX release dated 28 October 2026).

Future Work

Project work at Startrek prospects will include exploration drilling and respective resource model updates for internal planning purposes. The updated resource model will be used to inform future mine planning and exploration targeting in FY27.

Table of Results

All available assays received in the period are reported (Table 1) at a 3g/t Au lower cut-off and a maximum of 1m internal dilution.
