Dateline and US Government Seek Ninth Circuit Stay

Application lodged to allow work at Colosseum to resume pending appeal

Dateline Resources Limited (ASX: DTR, OTCQB: DTREF, FSE: YE1) (Dateline or the Company) advises that, following Friday's decision in the California District Court, the Company and the US Government have each lodged motions with the United States Court of Appeals for the Ninth Circuit to stay the preliminary injunction pending appeal.

The stay motion will be decided afresh by a three-judge panel of the Ninth Circuit .

The motions address each of the factors the Court must weigh - the merits of the appeal, the harm caused by the injunction, the limited impact of resuming work and the national interest - and submit that each favours a stay.

The Company's position remains that the Plan of Operations approved by the Bureau of Land Management in 1985 constitutes a valid existing right that survived the creation of the Mojave National Preserve, as recognised by the National Park Service in 1995, 2024 and again in April 2025.

The Company will update the market as the case progresses.

This ASX announcement has been authorised for release by the Company's Disclosure Committee.

About Dateline Resources Limited

Dateline Resources Limited (ASX: DTR, OTCQB: DTREF, FSE: YE1) is an Australian company focused on mining and exploration in North America. The Company owns 100% of the Colosseum Gold-REE Project in California.

The Colosseum Gold Mine is located in the Walker Lane Trend in East San Bernardino County, California and is located 10km north of Mountain Pass rare earth mine. A gold Bankable Feasibility Study was completed on the project in May 2026.

In March 2026, Dateline consolidated the Music Valley Heavy Rare Earth Project in Riverside and San Bernardino Counties, California. The region has known HREE mineralisation from USGS rock chip sampling, with recent mapping and sampling identifying highly anomalous grades within the targeted geological unit.

Dateline also owns the high-grade Argos Strontium Project, also located in San Bernardino County, California. Argos is reportedly the largest strontium deposit in the U.S. with previous celestite production grading 95%+ $SrSO_4$.
