Two Nevada Silver-Gold Projects
3,740m RC Drilling Soon!

- 2,140m initial Firenze RC program
- Firenze never previously drilled
- W-Project historic intersections never followed up

ALTITUDE MINERALS
ASX:ATT

AGM 11 NOVEMBER 2026

FIRENZE – NEVADA - SILVER & GOLD OPPORTUNITY

Firenze Project – 100% owned – Nevada, USA

DRILL READY

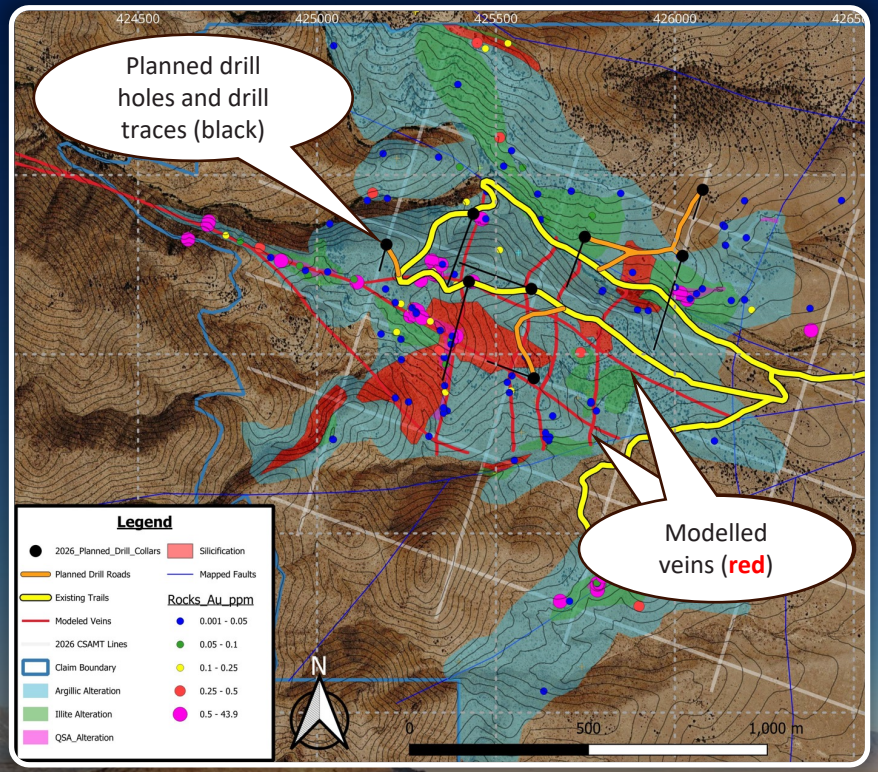

SILVER & GOLD TARGETS

- **Firenze is a completely undrilled silver & gold system** released by the BLM from wilderness zoning in 2022 – **creating a genuine first-pass drill opportunity**
- Exceptional *historical rock chip assays include:
  - **1,825 g/t Ag with 22.5 g/t Au**
  - **1,250 g/t Ag with 9.3 g/t Au**
  - **534 g/t Ag with 43.9 g/t Au**
  - **600 g/t Ag with 2 g/t Au**
- Outcropping low-sulfidation epithermal Ag-Au veins 1,200m in strike
- Company interpretation suggests epithermal system is preserved with potential high-grade boiling zone and feeder veins 100m to 250m below surface

DRILL TARGETING - FIRENZE

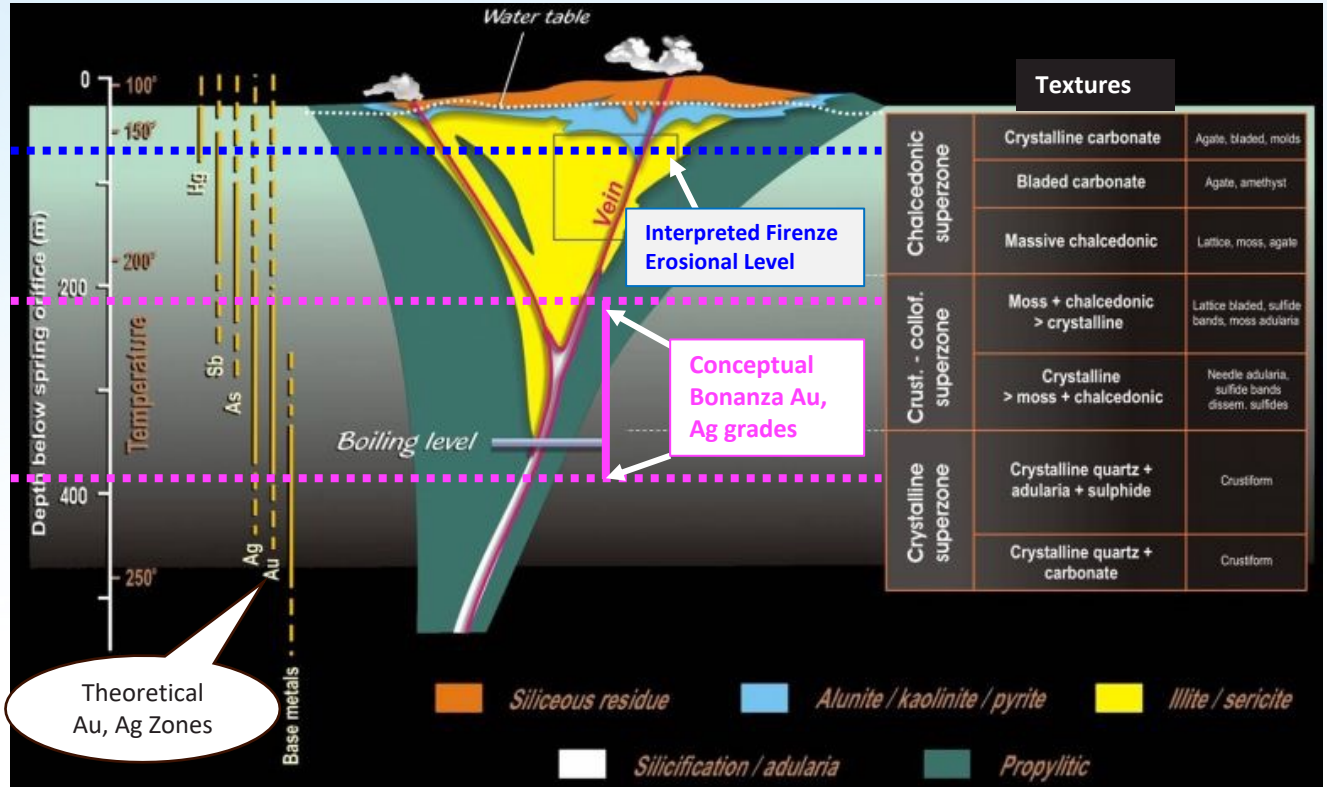

DRILL READY

Drill Targeting

- 2140m of reverse circulation (RC) drilling
- 8 drill holes
- Targeting by Nevada experienced Altitude Principal Geologist (USA) Gabe Graf
- Testing multiple structures validated by CSAMT & magnetic geophysics and mapping of structures and alteration
- Testing epithermal system from near surface to 250m below surface
- Targeting potential high-grade feeder veins and high-grade boiling zone
- Permits, tracks and drill pads completed
- Drill rig contracted - due shortly on site

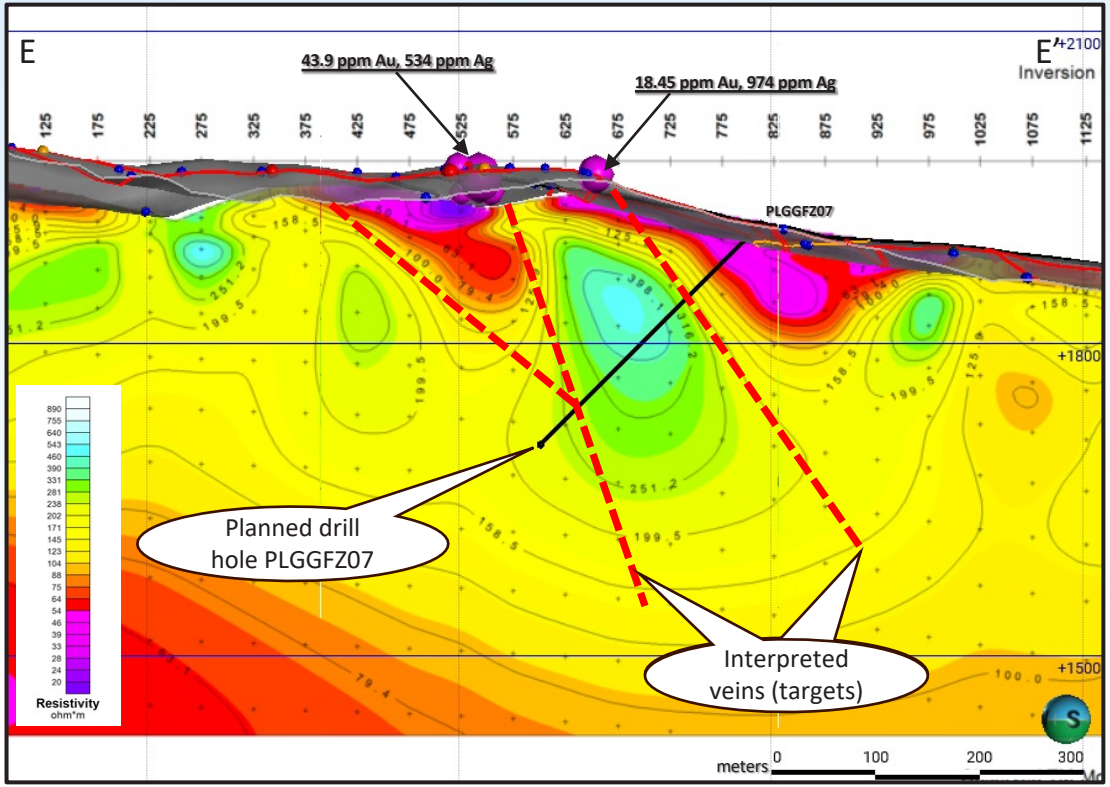

ABOUT EPITHERMAL MINERAL SYSTEMS

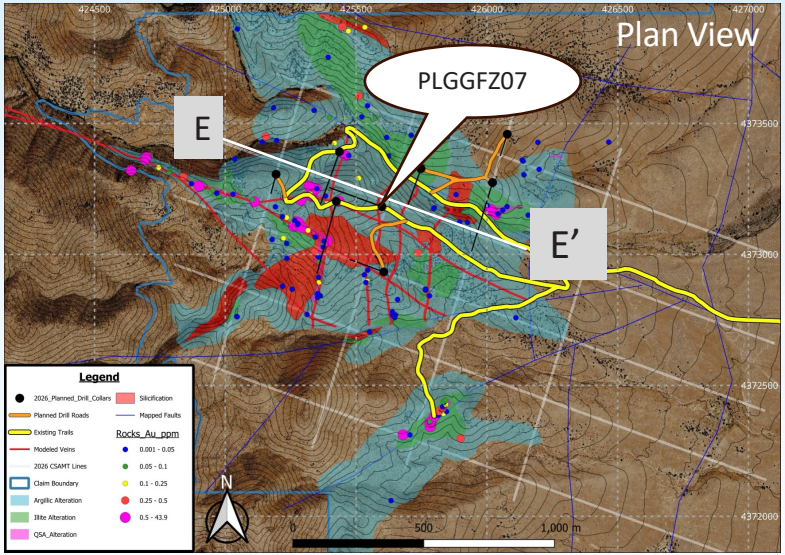

Firenze Project Field Observations of textures supporting interpreted erosional level. *Moss, massive chalcedony, adularia, bladed calcite (replaced with quartz), cockade, comb, colloform textures.*

Diagram After Buchanen (1981), Morrison et al (1990) and Corbett & Leach (1997)

Drill Section E-E' (PLGGFZ07)

Apparent resistivity section - CSAMT geophysics and planned drill section E-E' and hole plan, rock chips at surface; Red dash line interpreted veins from surface mapping and CSAMT results; Black line planned drill hole

AZI (T): 290°
DIP: 45°
Depth: 300m (downhole) ~ 200m below surface
Target: NE-SW striking orthogonal vein to main NW-SE vein. Targeting under high grade surface samples and under historic workings
Target Depth: ~250m
Target Elevation: ~1725m (~200m below surface)

FIRENZE DRILL TARGET SELECTION CRITERIA

Altitude Minerals applies strict investment gates before committing drilling capital

Firenze Project

- ✓ **in-demand strategic and precious metals - (Au-Ag)**
- ✓ **profitable mines in same geological region – (Multiple)**
- ✓ **favorable jurisdictions - (Nevada, #1 Ranked in the World by the Fraser Institute)**
- ✓ **economic scale potential – (1,200m strike, two parallel structures)**

Capital is allocated where drilling materially improves the discovery case or ATT divests our interest

ALTITUDE'S PIPELINE OF NEVADA DRILL TARGETS

Drill Ready

Firenze Project, Nevada

- **Silver & Gold Drill Targets Confirmed**
- **Drill permits secured**
- **Drill pads and access tracks completed**

Final Preparation

W-Project, Nevada

- **Outcrop sampling, geophysics & mapping completed**
- **3D Drill targeting completed**
- **Drill permit secured**
- **Earthworks to commence shortly**

Nevada – Arizona, USA

Epithermal Silver & Gold Opportunities +/- Strategic Minerals

ATT continually screens opportunities against the same disciplined acquisition and drilling criteria.

Watching Brief

WHY NEVADA?

- Nevada is home to established profitable mines and produced 70% of the USA's gold in 2024
- On its own, Nevada is the fifth largest gold producer globally – behind China, Russia, Australia and Canada.
- Nevada was recently ranked #1 in the World by the Fraser Institute for mining
- Good access and infrastructure – most projects have major Interstate highways nearby and 4WD tracks to significant outcrops
- Major exploration service providers throughout the state
- 63% of Nevada is under Federal Bureau of Land Management (BLM), providing well-established pathway for exploration authorisation and mine permitting.

WHY NOT NEVADA!

W-PROJECT: DEMONSTRATED MINERALISATION, STRUCTURAL TARGETS REMAIN UNTESTED

- **40 of 43 holes intersected gold mineralisation**
- **Seven holes ended in mineralisation**
- Significant Historical Intersections include:
  - **37m @ 1.30 g/t Au, 9.8g/t Ag from 31m (W87-1)**
  - **3m @ 3.75 g/t Au, 4.2 g/t Ag from 73m (W87-6)**
- Up to 30m wide outcropping epithermal veins
- Historical Shively Silver Mine (c1910) was untested by any geophysics (prior to ATT CSAMT & Magnetics)

Historical drilling demonstrated mineralisation but did not systematically test the structural intersections or the system at depth; and no geophysics deployed to identify drill targets prior to ATT work.

NEXT STEPS NEVADA

SILVER & GOLD TARGETS, NEVADA

3740m Drilling Planned 2026

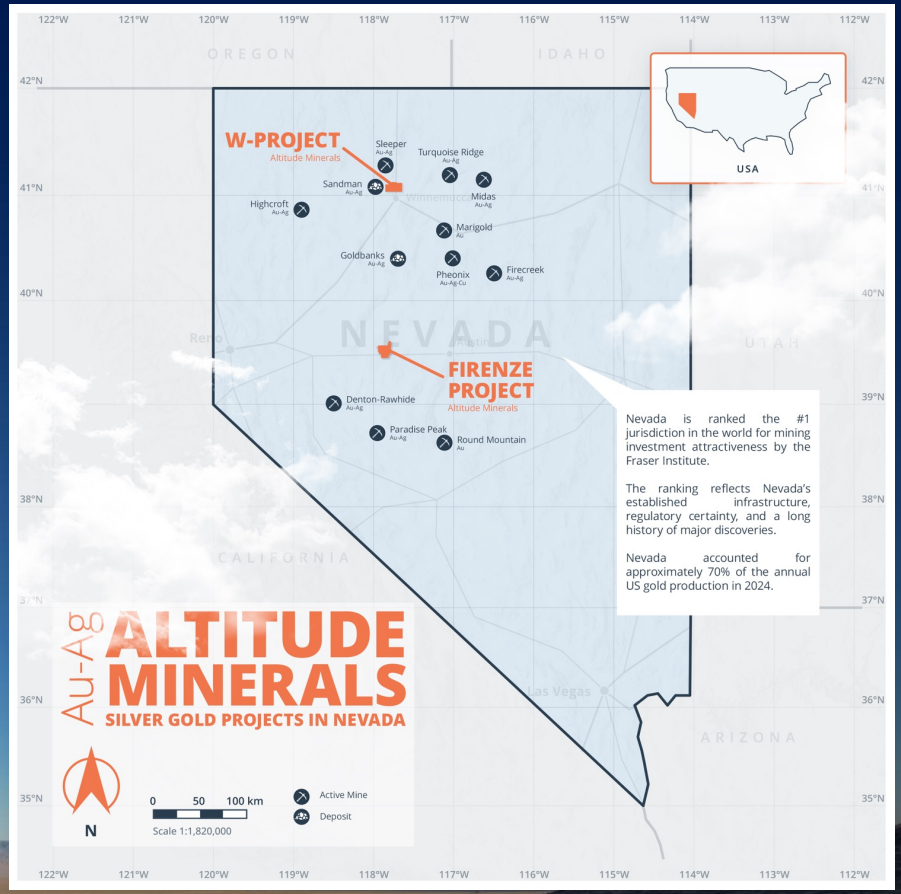

- Firenze 2,140m RC Program - pending drill rig completing 3rd party program
- W-Project 1,600m RC Program - immediately after Firenze Drilling

Firenze Project

- High-priority drill targets defined
- 100% drill ready - fully permitted, drill pads ready

W-Project

- Geophysics surveys, mapping and outcrop sampling completed, drill permit secured
- Drill targets identified for 1600m of drilling
- Earthworks to be completed shortly

DISCLAIMER, JORC INFORMATION

This presentation has been prepared by Altitude Minerals Ltd (Altitude). This document contains current background information as of the presentation date. The presentation is in summary form and does not purport to be all-inclusive or complete. Recipients should conduct their investigations and perform their analyses to satisfy themselves regarding the accuracy and completeness of this presentation's information, statements and opinions.
