archTIS Secures A$217,000 Contract with U.S. Satellite Communications and Defence Technology Company

Customer Selects Spirion SDM and archTIS Trusted Data Integration to Solve Cross-Domain Security Challenges

---

HIGHLIGHTS:

- **New U.S. Defence Industrial Base Customer:** Contract awarded by a NASDAQ-listed, U.S.-headquartered satellite communications and defence technology company, with a total contract value of approximately A$217,000.
- **Software-led Contract:** A$115,000 in software comprised of Spirion Sensitive Data Manager (SDM) software and archTIS Trusted Data Integration (TDI), alongside A$102,000 for support and customer development services
- **Competitive Win:** Selected following a competitive evaluation against established data security vendors.
- **Unique Air-Gapped Capability:** Validates archTIS' combined Spirion and TDI capability to discover, classify and persistently label sensitive government data in air-gapped, cross-domain environments.

archTIS Limited (ASX:AR9, OTCQB:ARHLF) ("archTIS" or the "Company"), a global provider of data-centric security solutions for the secure collaboration of sensitive information, is pleased to announce it has been awarded a contract by a NASDAQ-listed, U.S.-headquartered satellite communications and defence technology company (the "Customer").

The award value is A$217,000, consisting of A$115,000 for Spirion Sensitive Data Manager (SDM) and archTIS Trusted Data Integration (TDI) software licenses, plus A$102,000 for support and customer development services. The contract term is 12 months and is subject to standard terms and conditions.

Daniel Lai, Managing Director and CEO, stated: "Defence contractors need to share sensitive government data with partners across systems while maintaining strict control. This win demonstrates our solutions working together to solve complex security challenges across sensitive systems that other solutions cannot. Furthermore, pairing Spirion SDM's discovery and classification with TDI's policy enforcement capabilities addresses a common cross-domain challenge for defense contractors that will drive repeatable opportunities.

"This is our third U.S. commercial win in a matter of weeks, following aviation and financial services contracts, and the NC Protect work we are delivering for the U.S. Department of Defense. Together, these wins demonstrate growing U.S. market momentum and reinforce our ability to convert strategic opportunities into repeatable growth."

The Customer hosts sensitive government data within an air-gapped network comprising both Linux and Windows systems. Before granting third-party partners access, the Customer needed to accurately discover and classify this data and keep classification labels attached as files moved cross-domain. Previously, the classifications were lost on transfer.

The Customer selected archTIS' Spirion SDM and TDI products to solve this. Spirion identifies and classifies each document or file inside the air-gapped environment, including non-standard file types and custom data types. TDI then makes those classification labels

persistent, keeping them attached as files move between the cross-domain environment, a capability the Customer did not find in other tools evaluated.

The opportunity originated through archTIS' engagement with the U.S. Defense Industrial Base community and demonstrates the relevance of the combined Spirion and TDI offering to defence contractors protecting controlled government data.

-ENDS-

Authorised for issue by order of the Board of Directors.
